Exemple: How many states! Multiplicity Function : pic=5; pi 5{-1,+1}

Binomial Expussion: (xty) = \(\frac{N}{n} \cdot \frac{N}{n} \cdot \f
a Gaussier X_0 = \sqrt{\frac{2}{N-1}} on the set of the set 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Relative Magnerization: x = \frac{1}{N}; x \{-1, 1\}

Since G(N, m) is maximal at M=0. Goal G(N, m) < 1.

If N is large, and x is small, then N_1 and N_2 are large time. (N-N_1)(N_1)?

N! \approx \sqrt{2\pi N} \cdot N \cdot \frac{1}{2\pi N} + O(N_2) = 5 + O(N_2) = 5 + O(N_1) - \log(N_1) - \log(N_1) + \log(N_1) + \log(N_1) + \log(N_1) - \log(N_1) - \log(N_1) + \log(

                                                                                                                                                                                                                                                                                                                    Locatolica in rotation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         μιηνιΝ)=κοΤίου
